

CIRM Funded Clinical Trials

**A Phase I dose escalation and expansion clinical trial of the novel first-in-class Polo-like Kinase 4 (PLK4) inhibitor, CFI-400945 in patients with advanced solid tumors**

<b>Disease Area:</b>	Solid Tumors
<b>Investigator:</b>	Dennis Slamon
<b>Institution:</b>	University of California, Los Angeles
<b>CIRM Grant:</b>	DR3-07067
<b>Award Value:</b>	\$5,683,693
<b>Trial Sponsor:</b>	University Health Network, Toronto
<b>Trial Stage:</b>	Phase 1
<b>Trial Status:</b>	Recruiting
<b>Targeted Enrollment:</b>	48
<b>ClinicalTrials.gov ID:</b>	NCT01954316

Dennis Slamon

**Details:**

Solid tumors are the most prevalent form of cancer, and are a major cause of death worldwide. A team at UCLA is testing a drug for the treatment of cancer that works by blocking PLK4, a protein that is important in regulating cell growth, division and death. This protein is important for the survival of the cancer stem cell as well as the rest of the cells in a tumor. It is hypothesized that blocking this protein from working in the tumor may stop or even shrink tumor growth.

**Design:**

Dose escalation and expansion.

**Goal:**

Determination of maximum tolerated dose and recommended Phase 2 dose. Safety. PK. Efficacy in solid cancers.

**Updates:**

Ongoing.
