
Preclinical Development of An HSC-Engineered Off-The-Shelf iNKT Cell Therapy for Cancer

Grant Award Details

Preclinical Development of An HSC-Engineered Off-The-Shelf iNKT Cell Therapy for Cancer

Grant Type: Quest - Discovery Stage Research Projects

Grant Number: DISC2-11157

Project Objective: The expected outcome is a therapeutic candidate, allogeneic HSC-engineered HLA-I/II-negative human iNKT cells, that can potentially be used as an off-the-shelf cellular therapy for treating cancer.

Investigator:

Name:	Lili Yang
Institution:	University of California, Los Angeles
Type:	PI

Disease Focus: Cancer

Human Stem Cell Use: Adult Stem Cell

Award Value: \$1,404,000

Status: Active

Grant Application Details

Application Title: Preclinical Development of An HSC-Engineered Off-The-Shelf iNKT Cell Therapy for Cancer

Public Abstract:**Research Objective**

The expected outcome is a therapeutic candidate, allogeneic HSC-engineered HLA-I/II-negative human iNKT cells, that can potentially be used as an off-the-shelf cellular therapy for treating cancer.

Impact

The proposed off-the-shelf HSC-engineered iNKT therapy has the potential to become a general cancer immunotherapy for treating multiple cancers and a large population of cancer patients.

Major Proposed Activities

- Milestone 1: Production of the Universal HSC-Engineered iNKT (UHSC-iNKT) cells
(1. Generate lentivector; 2. Generate CRISPR; 3. Collect HSCs; 4. Engineer HSCs; 5. Produce HSC-engineered iNKT cells.)
- Milestone 2: Characterization of the UHSC-iNKT cells
(1. Identity/activity/purity; 2. PK/PD; 3. MOA; 4. Efficacy; 5. Safety; 6. Combination therapy.)
- Milestone 3: Delivery of the new therapeutic candidate
(1. Identify UHSC-iNKT cells as the new therapeutic candidate; 2. Develop a draft TPP; 3. Prepare for and conduct a pre-pre-IND meeting.)

Statement of Benefit to California:

iNKT cells have the remarkable capacity to target a broad range of cancers independent of tumor antigen- and MHC-restrictions. The proposed HSC-engineered off-the-shelf iNKT cellular product has the potential to benefit a large population of cancer patients at California who suffer from cancers that are subject to iNKT cell regulation, including solid tumors (melanoma, colon, lung, breast, and head and neck cancers) and blood cancers (leukemia, multiple myeloma, and myelodysplastic syndromes).
