

## **RFA 13-05: Appendix D: NIH Collaborations**

For this RFA, NIH will consider two types of collaborations with CIRM-funded researchers:

1. CIRM will fund California researchers in collaborations with NIH intramural investigators, who will be supported in accordance with NIH processes and regulations. NIH intramural investigators could collaborate with CIRM-funded investigators on various aspects of basic research. If you propose to collaborate with an NIH Partner PI, you should identify that investigator on your pre-application. In order to explore possibilities for collaboration with an NIH intramural researcher, please contact Joshua Hunsberger, Research Fellow, NIH Center for Regenerative Medicine at [hunsbergerj@mail.nih.gov](mailto:hunsbergerj@mail.nih.gov) or 301-496-6798.
2. Access to specialized NIH resources, with or without an NIH Partner PI. There is no need to make these arrangements at the pre-application stage. Those invited to submit full applications can include these collaborative resources in their full applications.
