

Partnering Opportunity For Translational Research Projects

Program Announcements:

- TRAN 1 (Therapeutic)
- TRAN 2 (Diagnostic)
- TRAN 3 (Medical Device)
- TRAN 4 (Tool)

PROGRAM ANNOUNCEMENT

10.12.15

CALIFORNIA'S
STEM CELL
AGENCY

Partnering Opportunity For Translational Research Projects

TRAN 1: Therapeutic

TRAN 2: Diagnostic

TRAN 3: Medical Device (non-diagnostic)

TRAN 4: Tool

Objective

The mission of California Institute for Regenerative Medicine (CIRM) is to accelerate stem cell therapies to patients with unmet medical needs.

The objective of this initiative is to create a highly competitive opportunity for promising stem cell-based projects that accelerate completion of translational stage activities necessary for advancement to clinical study or broad end use for any one of the following product types:

- ✓ **A. Stem cell-based *therapeutic candidate*** (TRAN 1)
- ✓ **B. *Diagnostic*** based on stem cells, or critical for stem cell based therapy development or use (TRAN 2)
- ✓ **C. *Medical device*** (non-diagnostic) for a stem cell-based therapy or critical for stem cell based therapy development or use (TRAN 3)
- ✓ **D. Novel *tool*** that addresses a critical bottleneck to the discovery or development of stem cell-based therapy (TRAN 4)

Project outcomes, allowable activities, and what qualifies for each of the above product types are described in the corresponding Appendices: A, B, C, and D.

The overall application and review process and general requirements for all product types are described in main document.

Award Information

How much funding can CIRM provide and for how long?

CIRM awards will cover direct project costs up to the following for each product type:

Product Type	Direct Project Costs, Funding Limit	Time Limit (Months)
Cell Therapy/Biologic	\$5M	30
Small Molecule Therapy	\$2.5M	30
Diagnostic	\$1.2M	24
Medical Device	\$2M	24
Tool	\$1M	24

The amount of direct project costs requested must be adequately justified and is subject to adjustments prior to issuance of an award based upon assessments of the Grants Working Group (GWG), the CIRM team, or by the Application Review Subcommittee of CIRM's Governing Board. The proposed project period must not exceed the maximum period indicated in the table above.

What activities will CIRM support?

CIRM resources will support all translational activities necessary for advancement to clinical study or end use for a stem cell-based therapy, device, diagnostic or tool. **As each product type has unique characteristics, the specific activities supported under a CIRM award for each product type are described in Appendices A-D.**

The appendices also describe activities that cannot be supported under this award for each product type.

How will funds be awarded?

CIRM will disburse funds pursuant to a Notice of Award. Under the Grants Administration Policy for Discovery and Translation Projects ("D&T GAP"), Translational Research Therapeutic awardees (TRAN 1) may elect to treat their award as a loan as specified in the D&T GAP. If an awardee does not make this election, the award will be treated as a grant.

CIRM 2.0

CALIFORNIA'S
STEM CELL
AGENCY

Eligibility

What types of projects are eligible for partnering?

To be eligible, the proposed project must satisfy the following requirements:

(1) The applicant must be ready to initiate work on the funded project within 90 days of approval.

Given the urgency of CIRM's mission, all approved awardees must initiate work on the funded project within 90 days of approval and authorization for funding by the Application Review Subcommittee of the Independent Citizens' Oversight Committee.

Therefore, investigators should only apply when their program has reached the stage where all eligibility criteria are met.

(2) The applicant must propose studies with an eligible therapeutic, device, diagnostic or tool candidate.

The proposed product must meet the specific eligibility criteria described for a therapeutic, diagnostic, device, or tool in [Appendices A-D](#).

(3) The development candidate must be at an appropriate stage of readiness.

The proposed candidate must meet the specific readiness criteria described for a therapeutic, diagnostic, device or tool in [Appendices A-D](#).

(4) The project team must include an experienced Project Manager

The project team must include a Project Manager who has experience in managing relevant translational programs and who is able to devote at least 50 percent effort to the project. This requirement does not apply to applicants for TRAN 4, Tool Translational Research Projects.

(5) The applicant must demonstrate appropriate levels of co-funding.

CIRM will require for-profit applicants to co-fund at least 20% of the total "Allowable Project Costs". Allowable Project Costs are those costs permitted under CIRM policies and regulations and include both direct, facilities and indirect costs. The sum of CIRM funds requested plus the co-funding contribution by the applicant make up the total Allowable Project Cost. Non-profit applicants may provide co-funding but it is only required when project costs are in excess of allowable CIRM award funding. The co-funding may come from any funding source arranged by the applicant but may not include "in-kind" or similar types of support. Documentation demonstrating the commitment of funds to cover the proposed co-funding amount must be provided at the time of application submission (e.g., copy of executed term sheet showing amount of co-funding, conditions, and source).

(6) For-profit organizations must demonstrate solvency

For-profit organizations must provide documentation that shows 180 days cash on hand from date of application submission and the financial ability to meet the co-

CIRM 2.0

CALIFORNIA'S
STEM CELL
AGENCY

funding and contingency requirements for the term of the project. The determination of solvency will be made at CIRM's sole discretion.

Who can apply?

California Based Organizations

California organizations (for-profit and non-profit) may use CIRM funds for eligible project costs incurred both in California and outside California. To qualify as a California organization, the organization must have >50% of its employees located in, and paid in, the state of California, and manage the award activities from the California location.

Non-California Based Organizations

Non-California organizations may also apply; however, CIRM funding can be used only for allowable expenditures incurred within California. The applicant must demonstrate by the application deadline a commitment of funds from other sources for project activities outside of California.

Who can serve as the Principal Investigator (PI)?

To be eligible, the PI must satisfy the following requirements:

- Must be an employee of the applicant organization
- Must commit at least 30 percent effort to working on the project (note: "project" includes both the CIRM-funded and applicant co-funded components). Any effort for which salary from CIRM is claimed must be expended in California
- Must be authorized by the applicant organization to conduct the research and assume the responsibilities of the PI

Schedule And Deadlines

Applications Due*	Nov 20, 2015. For future application offerings, due dates will be posted at www.cirm.ca.gov
Grants Working Group (GWG) Review	Approximately 90 days post submission
ICOC Review and Approval	Approximately 180 days post submission
Award Start	Must start within 90 days of award approval

* It is anticipated that applications under this program announcement will be accepted at approximately six-month intervals. Further information on subsequent offerings can be found at cirm.ca.gov.

CIRM 2.0

CALIFORNIA'S
STEM CELL
AGENCY

Application Review Information

What is the process for evaluating an application?

Pre-submission Consultation

In accordance with CIRM's mission, the Agency is committed to helping develop promising stem cell-based technologies by partnering with world-class investigators. Therefore, prospective applicants are encouraged to contact CIRM before applying with questions or to discuss their project's eligibility.

Eligibility Review

CIRM will assess whether the proposed project meets eligibility requirements sought under this program. If CIRM determines, in its sole discretion, that an application does not meet the eligibility requirements of the program or that the submitted application is incomplete or contains false or inaccurate information, CIRM will notify the applicant of its decision, allow an opportunity to remedy, and if not timely remedied, terminate all further action on the application.

Scientific Review

The scientific merit of each application will be assessed by the GWG, which is composed of fifteen subject matter experts from outside California, seven patient advocate members of the ICOC, and the Chair of the ICOC. The list of scientific members who may participate in the GWG review can be found at http://www.cirm.ca.gov/WorkingGroup_GrantsReview. The composition of the ICOC can be viewed at <http://www.cirm.ca.gov/GoverningBoard>.

The fifteen participating scientists on the GWG will evaluate the applications and score them according to scientific and technical merit, applying the review criteria described below.

If the number of applications received in any given cycle is significantly in excess of the number that the GWG can review in a single session, GWG members will conduct the review in two stages. In the first stage, reviewers will conduct a pre-review of applications to advance a subset of applications to second stage, the full GWG review described below. Those applications that are not advanced to the second stage will not be recommended for funding.

Applications for all product types within a cycle will be reviewed and ranked collectively by the GWG. There are no targeted quotas for funding specific product types. CIRM will select the most meritorious projects regardless of product type.

The Application Review Subcommittee will make final funding decisions giving consideration to the GWG recommendations and any CIRM team recommendations.

Confidentiality

CIRM's confidentiality and conflict screening rules apply to everyone who will have access to applications or who will attend any review meeting in which confidential information is discussed, including but not limited to CIRM team members, reviewers and members of the ICOC. (Per Gov. Code §6254.5(e), non-public records may be disclosed to government agencies under confidentiality agreements.)

CIRM 2.0

CALIFORNIA'S
STEM CELL
AGENCY

CIRM 2.0

CALIFORNIA'S
STEM CELL
AGENCY

How will the scientific merit of an application be evaluated?

Scientific members of the GWG will evaluate and score applications based on the following key questions:

1. Does the project hold the necessary significance and potential for impact?

Is the proposed product likely to impact an unmet medical need? Would the product accelerate or increase the likelihood of successfully developing a stem cell technology that significantly improves patient care? Does the proposed product offer a sufficient, impactful, and practical value proposition for patients and/or health care providers?

2. Is the rationale sound?

Is the proposed project based on a sound scientific and/or clinical rationale? Is it supported by the body of available data? Do the data support development of the product?

3. Is the project well planned and designed?

Is the project appropriately planned and designed to achieve meaningful outcomes and to complete all activities necessary to support the next stage of development (e.g., Pre-IND or other pre-submission meeting with the FDA for certain therapeutics, diagnostics or devices; advance to manufacturing for tools)? Is this a well-constructed, quality program? Do the project plan and timeline demonstrate an urgency that is commensurate with CIRM's mission?

4. Is the project feasible?

Are the proposed milestones and the expected project outcome likely to be achieved within the proposed timeline? Is the proposed team appropriately qualified and staffed? Does the team have access to all the necessary resources to conduct the proposed activities? Does the team have a viable contingency plan to manage risks and delay?

Application Components And Submission

How does one apply?

Applications must be completed and submitted online using the CIRM Grants Management Portal at <https://grants.cirm.ca.gov>. Any prospective PI must create a login in the system to access application materials and apply. Applications are available in the system only to the PI. A PI may submit only a single translational application in a given review cycle.

Applications are due by Nov 20, 2015, then as posted by CIRM.

CIRM 2.0

CALIFORNIA'S
STEM CELL
AGENCY

What components does an application include?

The Grants Management Portal provides instructions for completing all the necessary components and submitting a final application. The application is designed to collect information necessary to appropriately evaluate the proposal and for CIRM to rapidly initiate an award if approved for funding. Applicants are required to indicate key personnel involved in the project, describe how the proposal addresses the objective of the partnering opportunity, provide a detailed plan of proposed activities, complete a detailed activity-based budget, and provide reference materials that confirms the status of the project. Applicants will also be required to provide a financial contingency plan that addresses how the applicant will cover possible funding shortfalls.

The main body of the proposal contains the following sections:

1. **Program Summary:** A brief description of the translational project for which partnering is sought and an overview of the overall development program.
2. **Target Product Profile:** Table summary of the candidate development goals – description of the aspirational product not the specific goals of your proposal (template provided).
3. **Statement of Significance and Impact:** Description of the unmet medical need; description of how the proposed product, if successful, would address an unmet need or accelerate or increase the likelihood successfully developing a stem cell treatment(s); and description of the value proposition for your intended product.
4. **Rationale:** Summary of the scientific and/or clinical rationale for developing the intended product as proposed and a summary of the available data that support moving forward with the proposed project at this stage.
5. **Plan and Milestones:** Project plan and milestones (template provided) to achieve the expected project outcome defined for the product proposed.
6. **Timeline:** Activities-based timeline in Gantt chart-like format.
7. **FDA Correspondence:** Relevant FDA correspondence and plan for addressing points raised by FDA.
8. **Team Organization:** Team structure, leadership, and communications plan, including any CROs or CMOs that will be utilized.
9. **Contingency Plan: Summary of potential risks, costs associated with those risks, and mitigation strategies, together with a financial contingency plan outlining viable funding sources in the event that costs exceed the amount of funding disbursement.**
10. **Resources and Environment:** A brief description of the resources available to the project and environment.
11. **References**

Who are Key Personnel?

In the application, we ask you to identify by name pertinent Key Personnel and their specific roles on the project. Key Personnel are defined as (1) the principal investigator or program director; or (2) any other person, including an independent consultant or an employee of a Subcontractor or Partner, who is expected to contribute to the scientific development or execution of the project in a substantive, measurable way *and* who is expected to: (a) receive or has been promised income,

CIRM 2.0

CALIFORNIA'S
STEM CELL
AGENCY

or anything else of value, of \$10,000 or more per year for his or her contribution to the project or (b) contribute one percent (1%) or more effort to the proposed project. "Key Personnel" does not include a person who is expected to be involved in the proposed project but who does not satisfy conditions (1) or (2).

Individuals who do not meet the definition of Key Personnel may be supported with CIRM funds, but should **not** be identified by name in the application. Such unnamed personnel may be referenced indirectly by their role on the project (e.g., technician). The budget includes a line item for requesting support for unnamed personnel.

What should one know before preparing the budget?

A specific and well-justified activities-based budget must be provided that clearly outlines the total costs of the project, including those costs not proposed to be funded by CIRM. The corresponding budget justification should provide enough detail to allow budget professionals to determine the appropriateness of the costs in relation to the activities being performed. Allowable Project Costs for research funded by CIRM are detailed in the CIRM Grants Administration Policy for Discovery and Translation Stage Programs. Generally, project costs for personnel, supplies, travel, equipment, and subcontracts may be claimed. Limits for specific cost categories must be observed.

What are the rules for spending CIRM funds outside of California?

California Based Organizations

California organizations may use CIRM funds for Allowable Project Activities conducted both in California and outside of California. "Allowable Project Activities" means those activities that are conducted in California, and for activities outside of California, those activities over which the California organization exercises direction, supervision and control, including activities performed by a wholly owned subsidiary of the California organization outside of California. It does not include activities undertaken by a separate organization outside of California that retains intellectual property or publication rights in connection with the performance of those activities, including a research collaboration in which the research is conducted outside of California.

Non-California Based Organizations

Non-California organizations cannot use CIRM funds for any costs incurred outside California.

What are Direct Facilities Costs?

Direct Facilities Costs are the general operating costs of the grantee's facilities attributable to housing all elements of the CIRM-funded project or activity. Facilities costs for non-profit applicant organizations are limited to the current applicable, federally negotiated rates for the organization as defined by the Office of Management and Budget (OMB) Circular A-21 or A-122. Facilities rates for for-Profit applicant organizations are limited to 35% of the direct project costs. Facilities rates are applied to direct project costs exclusive of the costs of equipment, tuition and fees, research patient care costs, as well as the costs of each individual subcontract, consultant, and service agreement in excess of \$25,000. The facilities cost rates approved and in place at the time of the application are to be applied to the entire award project period.

CALIFORNIA'S
STEM CELL
AGENCY

How much can an applicant claim for indirect costs?

For-profit organizations cannot claim indirect costs. For non-profit organizations, indirect costs will be limited to 20% of allowable direct research funding costs awarded by CIRM (i.e., project costs and facilities costs), exclusive of the costs of equipment, tuition and fees, research patient care costs, as well as the costs of each individual subcontract, consultant, and service agreement in excess of \$25,000. The indirect cost rate budgeted at the time of application is to be applied to the entire award project period.

Award Administration

Issuance of Award

A CIRM award is issued via a Notice of Award, which is the formal contract that defines the terms and conditions of an award and documents the commitment of funds from CIRM. CIRM reserves the right to modify or establish funded project activities, milestones (both technical and financial), success criteria, timelines and budgets prior to issuance of the Notice of Award. CIRM may also review (for compliance with CIRM's policies and regulations) key contracts/agreements (e.g., with Contract Research Organizations or Contract Manufacturing Organizations) that are critical to the success of the project.

Milestones and Payment

Upon execution of the Notice of Award, CIRM will issue the first in a series of milestone-based payments. Continued CIRM funding is based on the achievement of specific Operational Milestones established by CIRM. An "Operational Milestone" is an objective event with defined criteria that is indicative of successful project progress on a "critical path" activity, that if not achieved in a timely manner will inhibit the accomplishment of the expected project outcome in the allowable project period. CIRM establishes Operational Milestones and success criteria at its sole discretion after consultation with the PI based upon information provided in the application. Should achievement of an Operational Milestone be delayed beyond what was forecast in the notice of award, the Awardee must notify CIRM and provide a plan to resolve within the 30 days.

CIRM will only issue subsequent payments after the Awardee provides CIRM with documentation demonstrating that an Operational Milestone has been accomplished. CIRM expects that the successful applicant will have developed contingency plans that thoughtfully identify risks to the project timeline and budget and provide details for covering such costs, including the source of funding (see "Contingency Plan" under Application Components).

If any Operational Milestone is delayed 6 months or more beyond the scheduled completion date identified in the Notice of Award, CIRM, in its sole discretion, may terminate the award.

Reporting

Grantees will be required to provide periodic written progress and financial reports to CIRM, including notice of achieving Operational Milestones.

CIRM 2.0

CALIFORNIA'S
STEM CELL
AGENCY

CIRM will partner with the Awardee to foster the success of the project through access to both internal experts and the ability to enlist the help of CIRM's external subject matter experts when needed. Awardees will have ongoing communication with the CIRM Program Officer throughout the duration of the award, typically meeting by teleconference and periodically in person.

Definitions

“California organization” means: An entity, regardless of profit status, that has >50% of its employees located in, and paid in, the state of California, and conducts the award activities from the California location.

“For-profit organization” means: a sole-proprietorship, partnership, limited liability company, corporation, or other legal entity that is organized or operated for the profit or financial benefit of its shareholders or other owners. Such organizations also are referred to as “commercial organizations”.

“Non-profit organization” means: (1) a governmental entity of the state of California; or (2) a legal entity that is tax exempt under Internal Revenue Code section 501(c)(3) and California Revenue and Taxation Code section 23701d.

“Operational Milestone” means an objective event with defined criteria that is indicative of successful project progress on a “critical path” activity, that if not achieved in a timely manner will inhibit the accomplishment of the expected project outcome in the allowable project period

“Partner” means an organization that, in exchange for the right to the opportunity for a future financial return, has (1) agreed to provide matching funds for the proposed project or (2) entered into an agreement with the applicant organization relating to the commercialization of the proposed project.

“Subcontractor” means an organization (other than the applicant organization) that is expected to: (a) contribute to the scientific development or execution of the project in a substantive, measurable way *and* (b) receive \$25,000 or more through the proposed project. “Subcontractor” does not include suppliers of widely available goods.

Appendices

CIRM Regulations

Awards made through this PA will be subject to all applicable CIRM regulations. These regulations can be found on CIRM’s website at <http://www.cirm.ca.gov/reg/default.asp>.

Appendix A: Therapeutics

Project Outcome, Activities and Eligibility for Therapeutic Translational Research Projects (TRAN 1)

Project Outcome

Under a Therapeutic Translational Research Project award (TRAN 1), CIRM will enable completion of preclinical development stage activities for a stem cell based therapeutic candidate. Completion of these activities will position the therapeutic candidate for initiation of pivotal IND-enabling preclinical studies for an IND filing with the FDA.

For projects that are developing a cell-based therapy, a combination product including a cell therapy component, or an eligible biologic, the **expected outcome** is the conduct of a well prepared pre-IND meeting resulting in correspondence from the FDA confirming agreement with the IND-enabling preclinical plan.

For projects that are developing an eligible small molecule candidate, the **expected outcome** is completion, with the lead candidate, of activities that will enable initiation of pivotal IND-enabling preclinical studies for an IND filing with the FDA.

What activities will CIRM support to develop a therapeutic?

CIRM funds will support the following activities under TRAN 1:

- All activities necessary to ready a single therapeutic candidate for pivotal IND-enabling preclinical studies including:
 - Preparation of cGMP-compliant Master and Working cell banks
 - Assay development and qualification (e.g. in-process and release assays, stability, activity and immunogenicity assays)
 - Stability studies
 - Process development and transfer to manufacturing
 - Candidate production to support translational studies
 - Biomarker development
 - Conduct of non-clinical studies including pharmacodynamic, pharmacokinetic (cell biodistribution/fate), immunogenicity and mechanism of action (MOA) studies
 - Studies to select dose, determine regimen and route of administration
 - Pilot preclinical safety, toxicology and tumorigenicity studies
 - Selection of indication, development of a clinical plan, including a clinical protocol synopsis and draft protocol, for a Phase 1 trial
 - Preparation for and conduct of a Pre-IND meeting with the FDA

CIRM funds cannot be used to support the following activities under TRAN 1:

- cGMP manufacturing to supply the intended Phase 1 clinical trial
- Clinical trial activities including start-up activities

- Studies for therapeutic candidate discovery including lead optimization

What therapeutic projects are eligible for funding?

(1) The applicant must propose studies with an eligible therapeutic candidate.

CIRM will support preclinical studies that enable readiness to execute on the IND-enabling preclinical plan for a single IND filing with the FDA for a therapeutic candidate that is either:

- A cell therapy where human stem, progenitor cells or directly reprogrammed cells either compose the therapy or are used to manufacture the therapy. (Minimally manipulated bone marrow cells, minimally manipulated cord blood or unmodified hematopoietic stem cells (HSCs), are **not** eligible under this call.)
- A small molecule or biologic that (i) stimulates/recruits endogenous stem cells as the primary MOA for repair/regeneration OR specifically targets cancer stem cells as the primary MOA, and (ii) is being developed for a rare or unmet need unlikely to receive funding from other sources.

(2) The therapeutic candidate must be at an appropriate stage of readiness.

- Reproducible disease modifying activity must have been demonstrated with the candidate in preclinical model(s) relevant to the target indication(s)
- For all projects developing an allogeneic cell therapy:
 - Cells meet the donor eligibility requirements as described in “Guidance for Industry: Eligibility Determination for Donors of Human Cells, Tissues, and Cellular and Tissue-Based Products (August 2007)” <http://www.fda.gov/downloads/BiologicsBloodVaccines/GuidanceComplianceRegulatoryInformation/Guidances/Tissue/ucm091345.pdf> OR, IF NOT:
 - A plan is proposed to address the donor eligibility requirements

CIRM
2.0

CALIFORNIA'S
STEM CELL
AGENCY

Appendix B: Diagnostics

Project Outcome, Activities and Eligibility for Diagnostic Translational Research Projects (TRAN 2)

Project Outcome

Under a Diagnostic Translational Research Project award (TRAN 2), CIRM will enable completion of development activities for diagnostics for patient screening, risk stratification, diagnosis, treatment selection or monitoring that are based on stem cells or critical for stem cell based therapy development or use.

For projects that are developing a diagnostic for multi-site commercial laboratory use, the **expected outcome** is the of conduct a well-prepared Pre-Investigational Device Exemption (Pre-IDE) or comparable Pre- Submission meeting* with the FDA resulting in correspondence from the FDA indicating agreement on the Clinical Plan and Intended Use to enable filing for clearance/approval to market under a Premarket Notification 510(k) or a Premarket Approval (PMA).

For projects that are developing a diagnostic for a single commercial reference lab use, the **expected outcome** is the completion of activities to achieve acceptance of a well-prepared analytical validation/verification report and clinical validation plan that meets the requirements under CLIA (Clinical Laboratory Improvement Amendments) to enable diagnostic test launch.

*(<http://www.fda.gov/downloads/MedicalDevices/DeviceRegulationandGuidance/GuidanceDocuments/UCM311176.pdf>)

What activities will CIRM support to develop a diagnostic?

CIRM funds will support the following activities under TRAN 2:

- Evaluation and verification of unmet medical and user needs
- Implementation of Design Control including initiation and maintenance of Design History File
- Implementation of risk analysis and risk management
- Diagnostic product design development including assay, software development and optimization
- Development of design verification and validation protocols
- Initial verification and validation testing
- Demonstration of sensitivity, specificity, reproducibility and accuracy adequate for intended use
- Testing with optimized assay of sufficient well characterized clinical samples to confirm performance adequate for intended use
- Determination/evaluation of intended use, regulatory path and clinical plan
- Development of clinical (validation/verification) protocols
- Development of a full validation report of test performance characteristics
- Development of manufacturing plan

CIRM 2.0

CALIFORNIA'S
STEM CELL
AGENCY

- Preparation for and conduct of Pre-IDE (or other Pre-Submission) meeting(s) with the FDA
(<http://www.fda.gov/downloads/MedicalDevices/DeviceRegulationandGuidance/GuidanceDocuments/UCM311176.pdf>)

CIRM funds cannot be used to support the following activities under TRAN 2:

- Implementation of manufacturing of final diagnostic product design to meet applicable regulatory requirements
- Conduct of final verification, validation testing
- Clinical studies required for marketing approval
- Biomarker, technology discovery, candidate test discovery

What diagnostic projects are eligible for funding?

(1) The applicant must propose studies with an eligible diagnostic candidate.

CIRM will support studies on a candidate diagnostic for patient screening, risk stratification, diagnosis, treatment selection or monitoring that will be regulated by the FDA or by the CMS (Centers for Medicare & Medicaid Services (CMS) under CLIA:

- Where stem, progenitor or directly reprogrammed cells either comprise the diagnostic or are used to manufacture the diagnostic OR
- Where the diagnostic is being developed for an intended use with human stem, progenitor or directly reprogrammed cells OR
- Where the intended use of the diagnostic addresses a critical bottleneck to translation, clinical development or use of stem cell therapies AND where testing with human stem, progenitor or directly reprogrammed cells confirms the utility of the diagnostic for stem cell based therapy development or use.

(2) The diagnostic candidate must be at an appropriate stage of readiness.

Proof of concept studies with a prototype test (technology, biomarker(s)) must have demonstrated that the analyte(s) can be measured at biologically relevant levels for the intended clinical use in sufficient samples to distinguish relevant differences within the target population.

CIRM
2.0

CALIFORNIA'S
STEM CELL
AGENCY

Appendix C: Medical Devices

Project Outcome, Activities and Eligibility for Medical Device Translational Research Projects (TRAN 3)

Project Outcome

Under a Medical Device Translational Research Project award (TRAN 3), CIRM will enable completion of development activities for a non-diagnostic medical device that is critical for stem cell based therapy development or use and that is subject to FDA regulation and approval for marketing either under a Premarket Notification 510(k), a Premarket Approval (PMA) or within a Biologics License Application (BLA).

For projects that are developing a significant risk medical device that is new or not approved for a given use where clinical trials are required, the **expected outcome** is the conduct of a well-prepared Pre-Investigational Device Exemption (Pre-IDE) meeting with the FDA resulting in correspondence from the FDA confirming agreement with the IDE-enabling preclinical plan.

For projects that are developing a non-significant risk or Class II medical device that is new or not approved for a given use, the **expected outcome** is the conduct of a well-prepared Pre-Submission* meeting with the FDA resulting in correspondence from the FDA indicating agreement on the Clinical Plan and Intended Use to enable filing for clearance/approval to market under a 510(k) or a (PMA).

*(<http://www.fda.gov/downloads/MedicalDevices/DeviceRegulationandGuidance/GuidanceDocuments/UCM311176.pdf>)

What activities will CIRM support to develop a device?

CIRM funds will support the following activities under TRAN 3:

- Evaluation and verification of unmet medical and user needs
- Implementation of Design Control including initiation and maintenance of Design History File
- Implementation of risk analysis and risk management
- Device product design development including prototype optimization, and testing to demonstrate technical feasibility
- Development of design verification and validation protocols
- Initial verification and validation testing
- Determination/evaluation of intended use, regulatory path and clinical plan
- Development of clinical (validation/verification) protocols
- Development of a full validation report of test performance characteristics
- Development of manufacturing plan
- Preparation for and conduct of Pre-IDE (or other Pre-Submission) meeting(s) with the FDA
(<http://www.fda.gov/downloads/MedicalDevices/DeviceRegulationandGuidance/GuidanceDocuments/UCM311176.pdf>)

CIRM
2.0

CALIFORNIA'S
STEM CELL
AGENCY

CIRM funds cannot be used to support the following activities under TRAN 3:

- Implementation of manufacturing process of locked device design that meets applicable regulatory requirements
- Conduct of final verification, validation testing
- Manufacturing to supply clinical studies and product launch
- Clinical studies required for marketing approval
- Technology discovery, device discovery

What device projects are eligible for funding?

(1) The applicant must propose studies with an eligible device candidate.

CIRM will support studies on a candidate device intended for use in the cure, mitigation, treatment or prevention of disease that will be regulated by the FDA:

- Where the device is being developed for an intended use with human stem, progenitor or directly reprogrammed cells OR
- Where the device is being developed for an intended use that addresses a critical bottleneck to translation, clinical development or use of stem cell therapies AND where testing with human stem, progenitor or directly reprogrammed cells confirms the utility of the device for stem cell based therapy development or use.

(2) The device candidate must be at an appropriate stage of readiness.

Proof of concept studies with a prototype device (candidate) must have demonstrated feasibility to meet initial performance criteria in test model(s) relevant to the intended use.

Appendix D: Tools

Project Outcome, Activities and Eligibility for Tool Translational Research Projects (TRAN 4)

Project Outcome

Under a Tool Translational Research Project award (TRAN 4), CIRM will enable the rapid translation of novel tools for broad use that address critical bottlenecks to the discovery or development of stem cell based therapies and that are **not** subject to regulation by the FDA (Food and Drug Administration) or by the CMS (Centers for Medicare & Medicaid Services (CMS) under CLIA (Clinical Laboratory Improvement Amendments).

For projects that are developing a novel tool for broad use, the **expected outcome** is to achieve a tool that consistently, robustly and effectively meets performance characteristics required to address the bottleneck and that is ready to be transferred to manufacturing.

For projects that are developing a novel tool for commercialization, the **expected outcome** is to achieve a tool that consistently, robustly and effectively meets performance characteristics required to address the bottleneck AND that is ready to be transferred to manufacturing.

What activities will CIRM support to develop a tool?

CIRM funds will support the following activities under TRAN 4:

- Evaluation and verification of unmet need (bottleneck) to be addressed by this tool
- Continued evaluation and refinement of criteria that tool must meet to adequately address the unmet need
- Tool prototype optimization and testing to address criteria
- Determination of “final” tool and testing to show consistent, robust and effective performance against criteria

CIRM funds cannot be used to support the following activities under TRAN 4:

- Development and implementation of manufacturing of “final” tool
- Conduct of final verification, validation testing
- Manufacturing to supply product launch
- Preparation for and conduct of clinical studies
- Technology discovery, tool discovery

What tool projects are eligible for funding?

(1) The applicant must propose studies with an eligible tool candidate.

CIRM will support studies on a candidate novel tool for broad use that addresses a critical bottleneck to the discovery, development or use of stem cell based therapies and that will NOT be regulated by the FDA or under CLIA:

CIRM 2.0

CALIFORNIA'S
STEM CELL
AGENCY

- Where stem, progenitor or directly reprogrammed cells either comprise the tool or are used to manufacture the tool OR
- Where testing with human stem, progenitor or directly reprogrammed cells confirms the utility of the tool to address a critical bottleneck to the discovery, development or use of stem cell based therapies.

(2) The tool candidate must be at an appropriate stage of readiness.

Proof of concept studies with a prototype tool (candidate) must have demonstrated feasibility to meet initial performance criteria in test system(s) relevant to addressing the bottleneck.
