

City of Hope Translational Development Center for the CIRM Alpha Clinics Network

The **City of Hope Translational Development Center (TDC)** was established in 2018 to provide a “one-stop shop” to support the translation of innovative preclinical ideas, guiding the development of investigational products from pre-clinical proof-of-concept to phase 1 clinical trials. TDC provides resources including training, product development, manufacturing, regulatory filing, and clinical testing for the development of novel therapeutic entities from small molecules to cell and gene therapy products. TDC has operationalized these processes to serve academic partners as well as small to medium sized corporations.

TDS Services

- Budgets and contracts – Clinical Trial Support Services (CTSS)
- Clinical protocol design and writing
- Clinical research content – EPIC Beacon/Beaken builds
- Clinical trial operations – Clinical Trials Office (CTO)
- Manufacturing (vector, cellular and small molecule GMP facilities)
- Regulatory affairs – Office of IND Development and Regulatory Affairs (OIDRA)
- Data safety and monitoring – Office of Research Protections
- Laboratory research – COH clinical and scientific research cores and laboratories
- Quality assurance – Quality Systems (QS)

To discuss how we can provide services for your CIRM Alpha Clinic Network trials, please contact Nojan Namakian at nnamakian@coh.org
