

## Telehealth

Our vision is to reduce geographic health disparities for patients in cell and gene therapy clinical trials across California by using telehealth to deliver specialized follow-up care within their local communities. Through the **UC Davis Telehealth Program**, local clinics leverage provider-to-provider telehealth technology to connect patients and their primary care providers at Federally Qualified Healthcare Centers (FQHCs), Rural Healthcare Centers (RHCs), Indian Health Services (IHS) and other remote healthcare facilities to UC Davis Health specialists leading these innovative therapies.

### About the Center for Health and Technology (CHT)

The CHT is a national leader in connecting patients in underserved areas with specialty and subspecialty care and is well-equipped to support clinical research. We operate a robust network of 25 clinics across 20 counties and coordinate more than 30 specialty and subspecialty consultations and appointments annually. Our innovative academic work and successful implementation of digital and telehealth solutions have earned UC Davis Health a strong regional, national, and international reputation.

### Partnering with Us

Our telehealth research encompasses a broad portfolio of active extramural grants, evaluating digital health and telehealth efficacy, cost-effectiveness, satisfaction, and new models of care. We can assist healthcare providers by:

- Connecting clinicians with potential partners in the targeted catchment area and providing guidance on any technical, programmatic, and billing infrastructure necessary to fully meet the requirements for conducting successful clinical trials
- Training medical teams and providers to use telehealth for complex assessments and care coordination – services that currently require patients to travel long distances and stay away from home for extended periods during treatment
- Providing research expertise in evaluating the clinical effectiveness and implementation of telehealth, supporting UC Davis Health's efforts to advance digital health equity

### Recent awards

- *Outstanding Service to Underserved Populations*, California Telehealth Resource Center
- *Telehealth Equity Catalyst Award* (2022 & 2023), Association of American Medical Colleges (AAMC)
