

Session IV: Accelerating Drug Development Based on Patient Data (45 mins)

Panelists: Merit Cudkowicz, Mark Frasier, Ralph Kern, Omar Khwaja,

- How can the ND community leverage genomic and clinical data, patient-derived iPSCs, etc. to accelerate drug development? What are the challenges?*
- Are there current exemplars in other disease areas that the ND community should look to model?*
- Does industry perceive value in a consortium approach utilizing pooled data sets?*

Co-founder

The background of the slide features a dark, textured image of a person's face, overlaid with various chemical structures and scientific notations, including OH , NH_2 , OCH_3 , HN , and H_3CO . There are also some faint numbers like 10722-54-341 and 172009.

My Research Focus

Data Integration

Interpretable AI

Accelerating Discovery

Clinical trial

**Clinical trials are mostly linear
and terminate on failure**

Barriers to Engineering Therapeutics

- Expertise is scattered
- Incentives are missing

A Proposal for Engineering Therapeutics

Fund integrative teams

- Clinical research sites
- Experts in AI

Return valuable data to industry

- Clinical and cellular responses

Plan tiered data release

- Time-tables agreed in advance to balance competing incentives

Funding agencies can foster collaboration

Accelerating Drug Development Based on Patient Data. Questions for the Panel:

- Which data are most useful for accelerating drug development?
- What are the potential benefits for data-driven approaches?
- What are the barriers?
- Is there something urgently needed that no existing organization will fund?
- What types of talent do we need to recruit to this challenge?
- What approaches have been successful in other diseases?
- How can we best get industry engaged?
